

City Property – Part 1

Due on Tues., Oct. 23 at midnight

Note we will discuss in class on Wed., Oct. 24 so there are no late days

You will design an ER diagram for analyzing the City of Beloit property data. The diagram can be a picture (even of something hand drawn) or from software. You are not creating the SQL or an actual DB but doing the design. You should include any questions you have and be prepared to discuss why your ER diagram meets the needs of this analysis. The two spreadsheets are available at <<removed link>>.

You will work in teams for this effort. You should not be discussing your work with other teams as the goal is to get independent ideas to discuss and use for creation of an actual DB to work on this problem. Only one member of each team needs to turn in the assignment on Moodle. The randomly generated teams are (names removed for posting):

Team 1

5 students

Team 2

5 students

Team 3

5 students

Team 4

4 students
